WELCOME TO VOMO

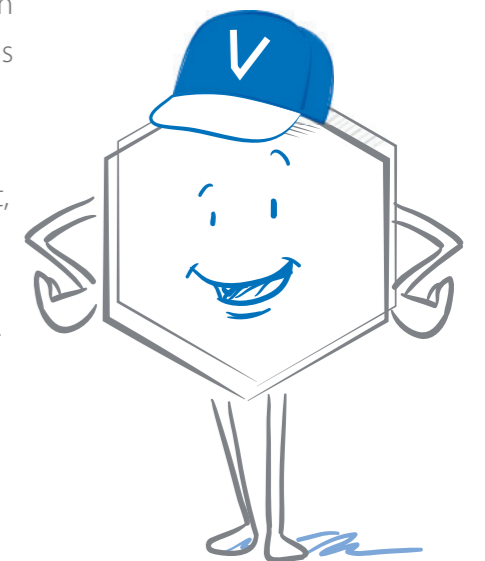

What on earth is VOMO? Easy answer: VOMO is your new and long-term partner for lightweight exhibition systems. But let us start at the beginning ... VOMO has been supplying various market segments with lightweight construction solutions from its main location in Germany for 20 years now. The lightweight construction elements with a paper honeycomb core produced by VOMO are used in a wide variety of areas. For the European market, the company produces primary material for professional trades such as carpentry or the furniture industry, large format sliding door solutions for the door industry and trade, as well as custom and special constructions for shopfitting and retail. The main market share of production, however, lies in the manufacturing and design of lightweight wall systems and furniture for trade shows, exhibitions, and events. In the past few years VOMO Germany was receiving a growing number of inquiries for the American market in this segment, but the long delivery routes and times turned out to be a considerable problem.

Made in Germany

There are new developments on the horizon to solve this problem. With VOMO USA, all VOMO advantages are immediately available to the American market – fast and easy. With stock in Las Vegas, VOMO USA can now not only guarantee short communication channels, but also serve customers' inquiries and requests at short notice with its on-site distribution channels. All products are optimized for the requirements and needs of the American market.

In this small brochure you will find a first overview of the lightweight, modular, sustainable and easy-to-use BT 21 U-Table solutions. I will do my best to give you useful tips on these U-Table solutions made by VOMO. My human colleagues are always available to answer your questions.

I am looking forward to a great collaboration!
Your VOMY

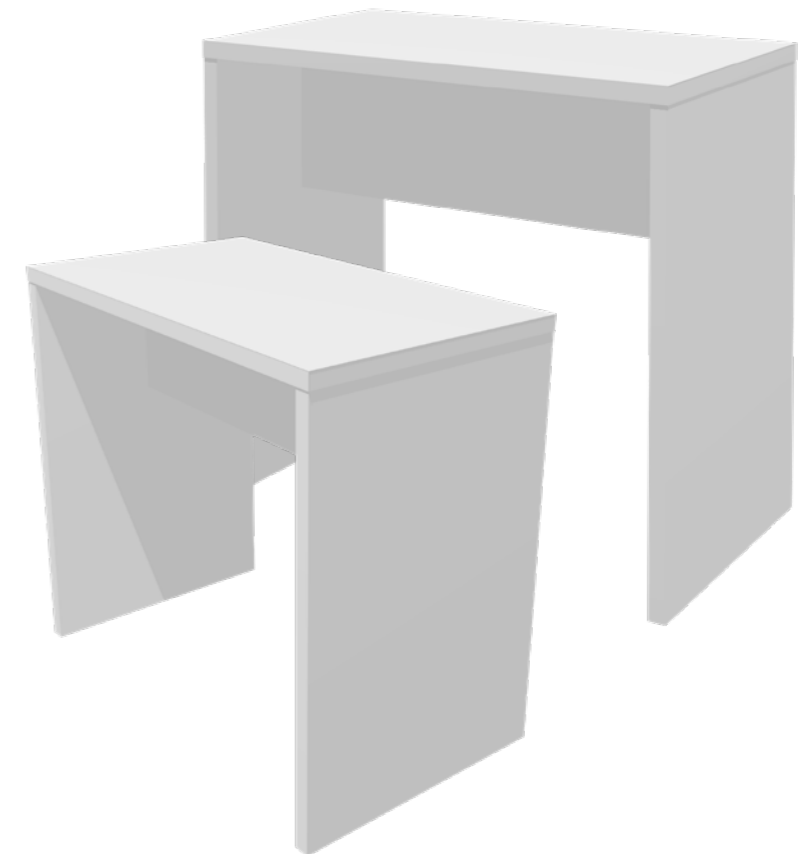

THE PRODUCT

- ✓ lightweight
- ✓ modular
- ✓ sustainable
- ✓ easy to handle

BT 21

Lightweight U-Table solutions

The lightweight U-Table solutions from the VOMO BT 21 series combine weight savings with efficiency. A sophisticated connection system ensures quick assembly and disassembly of the stackable individual elements. Our honeycomb panel structure combines stability with weight reduction. Perfect for all table applications in Live Events.

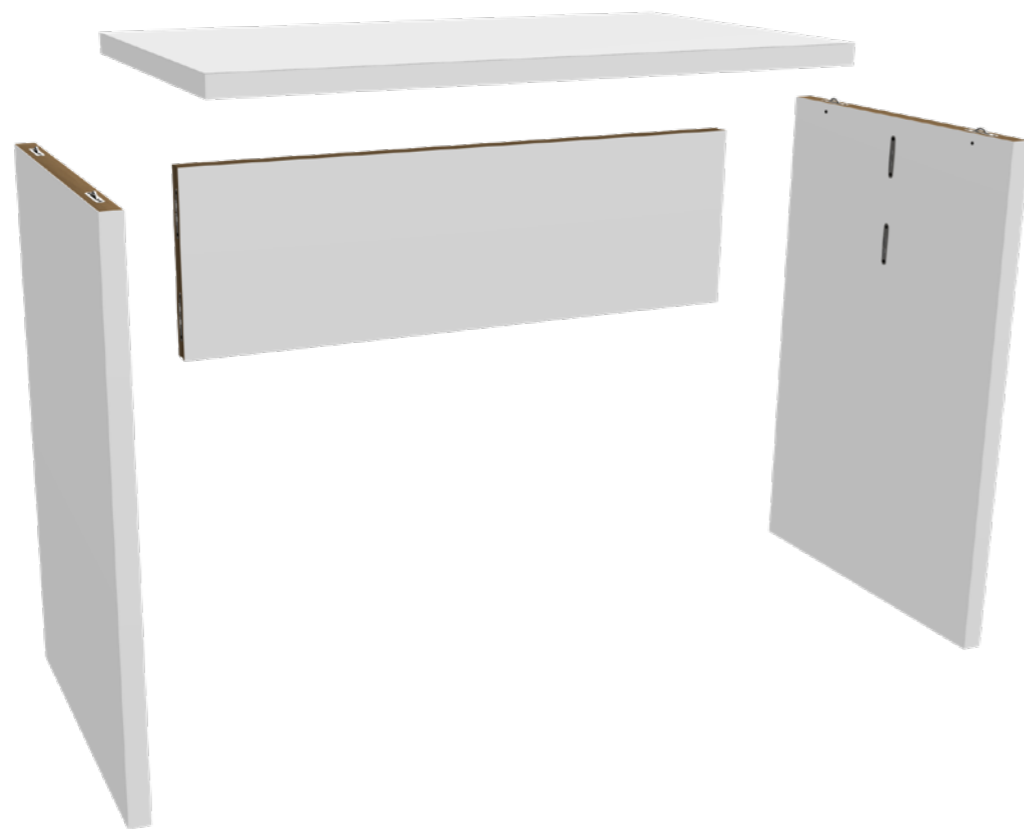

THE BASICS

BASIC SPECIFICATION

VOMO elements are based on the principle of a sandwich element or also called honeycomb panel. These panels always consist of a paper honeycomb core and a wood-based material carrier deck. In the case of the BT 21 lightweight U-Table solutions, these panels are covered with a high-quality HPL top layer. The required connector technology is embedded in the frame wood and the visible edges are covered with ABS edge with the same decor.

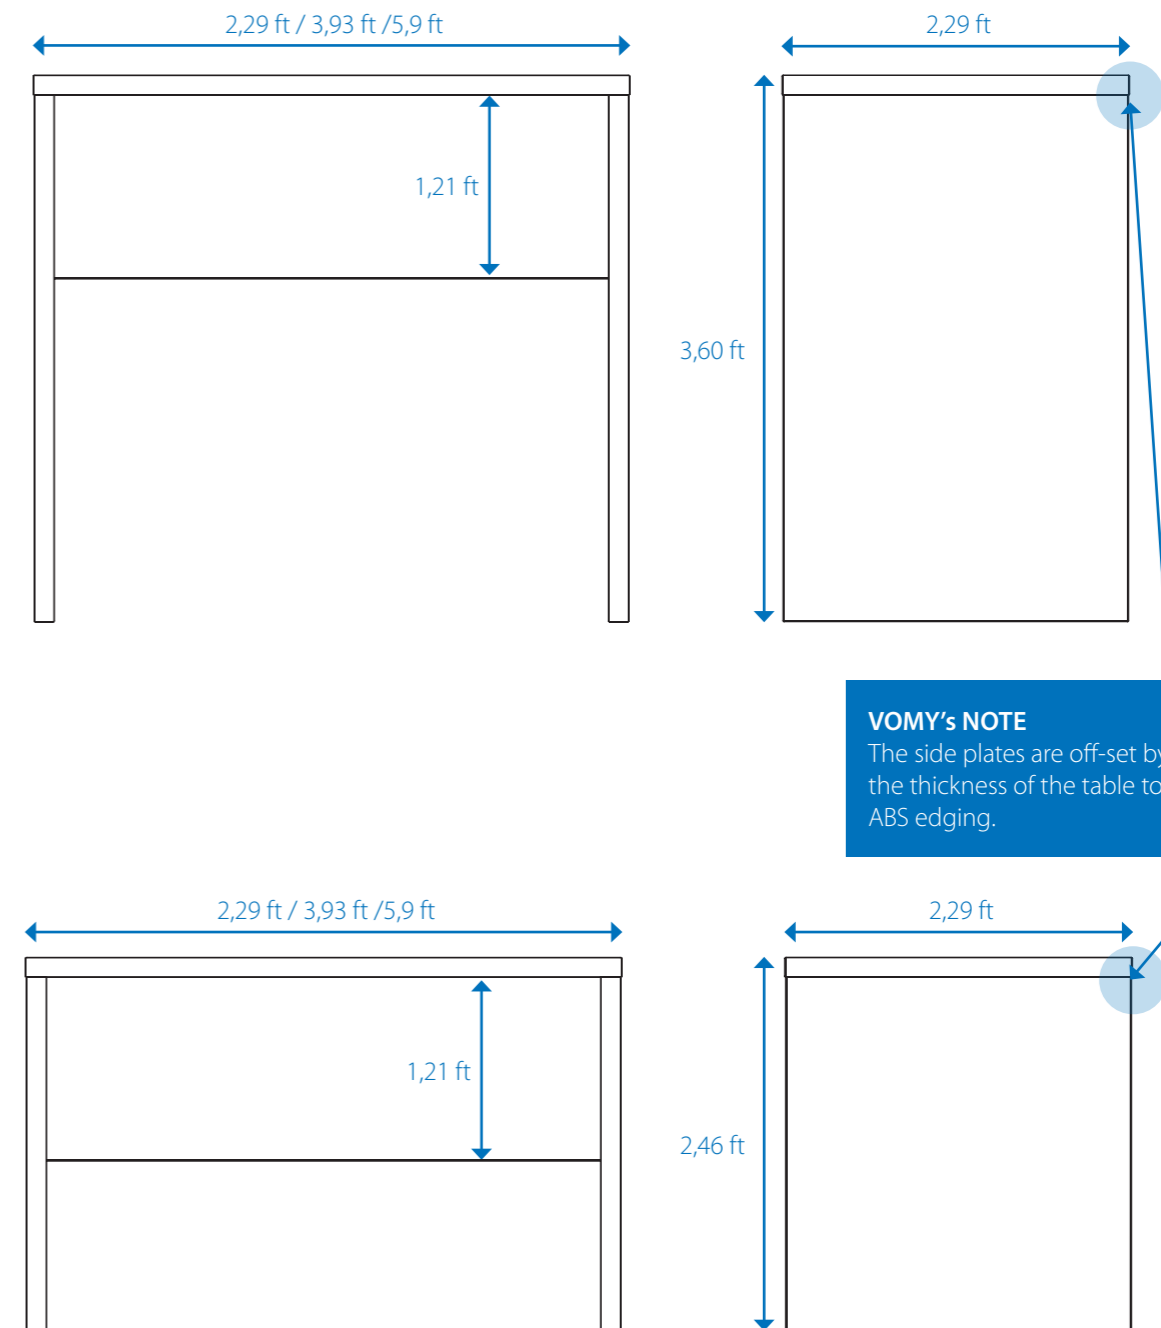

DETAILS

- Total Thickness: 1,56 "
- Decor Layer: HPL white 0,03 "
- Carrier: HDF 0,11 "
- Core: Honeycomb paper core
- Frame: MDF/WOOD/ABS

BASIC MEASUREMENTS

The VOMO lightweight U-Tables are available as low and high table variants, each in 3 different widths. Due to the standardized 2.29' depths of our BT-elements, combinations of the individual elements are possible.

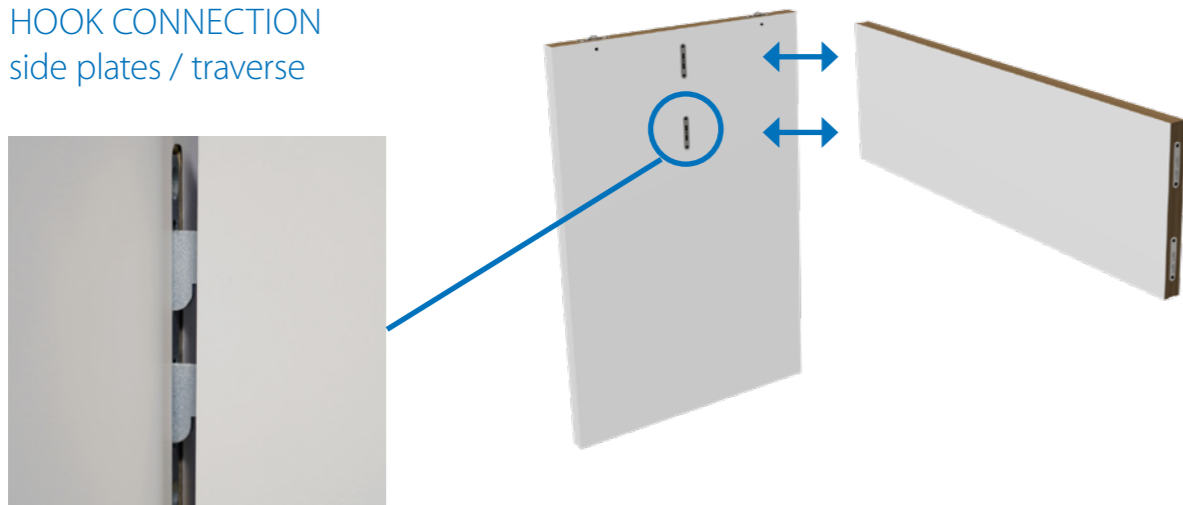

VOMY'S NOTE
The side plates are off-set by the thickness of the table top's ABS edging.

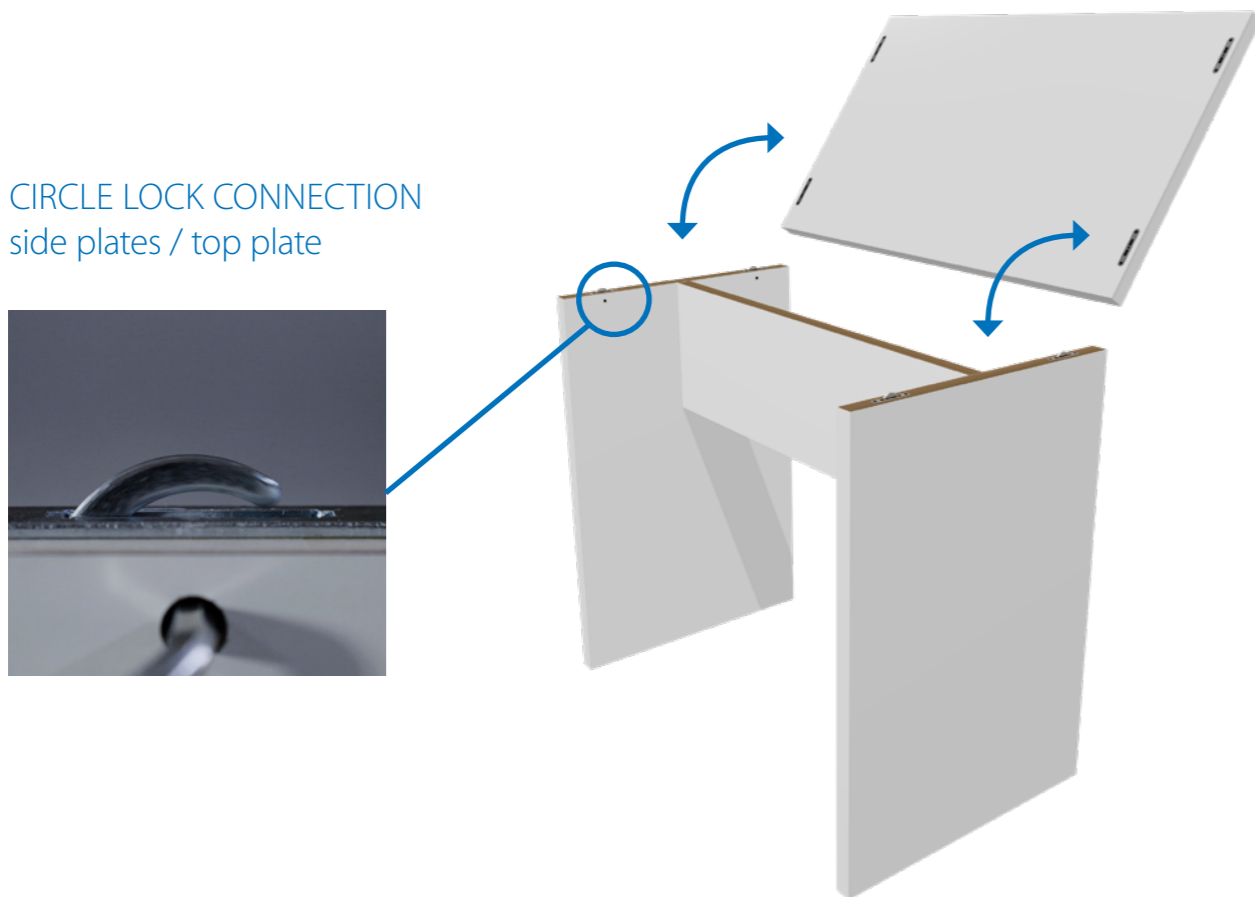

THE SYSTEM

All U Table variants of the BT 21 series can be disassembled into individual parts and stacked. This ensures space-saving storage and transport. The individual parts are connected and locked together by means of hook connectors and circle locks. The only things you need are a 7 mm Allen Key and your teammate .

HOOK CONNECTION side plates / traverse

CIRCLE LOCK CONNECTION side plates / top plate
